PRECAUTIONS TO BE TAKEN WHEN THE OUTRIGGERS ARE EXTENDED:

1. The total rated loads shown are for the case where the crane is set horizontally on firm level ground. They include the weights of the slings and hooks (main hook: 460kg, 25t hook: 300kg, auxiliary hook: 100kg).
The values above the bold lines are based on the crane strength while those below are based on the crane stability.
2. Since the working radii are based on the actual values including the deflection of the boom, operations should be performed in accordance with the working radii.
3. Jib operations should be performed in accordance with the boom angle, irrespective of the boom length. The working radii are reference values for the case where the jib is mounted to a 41.2m boom.
4. The total rated load for the single top shall be the value obtained by subtracting the weight of the hook mounted on the boom from the total rated load of the boom and must not exceed 4.5t.
5. High-speed unwind function should be performed only when lowering the hook alone and sudden braking operations must be avoided.
6. The table below shows the standard number of part lines for each boom length. When using with other than this number of part lines, the load per line should not exceed 4.25t for the main winch, and 4.5t for the auxiliary winch.

Boom length	9, 7m	16.0 m	22.3m	28.6 m	34.9m	38.0 5m	41.2 m	Jib/Single top
Number of part lines	12	8	6	4	4	4	4	1

7. The hoisting performance for the "Over sides" range will differ according to the extended width of the outriggers. Operations should be performed in accordance with the performance corresponding to the extended width. Also, although the hoisting performances for the "Over front" and "Over rear" ranges are equivalent to those of the "outriggers fully extended" condition, the front and rear ranges (angle a) will differ according to the width to which the outriggers are extended in the left and right directions.

PRECAUTIONS TO BE TAKEN WHEN THE OUTRIGGERS ARE NOT USED:

- The total rated loads shown are for the case where the tire air pressure on firm level ground is as specified 800kPa (8.00kgf/cm²) and the suspension-lock cylinder is retracted as much as possible. They include the weights of the slings and hooks (main hook: 460kg, 25t hook: 300kg, auxiliary hook: 100kg).
The values above the bold lines are based on the crane strength while those below are based on the crane stability. The foundation, working conditions, etc. should be taken into consideration for actual work.
- Since the working radii are based on the actual values including the deflection of the boom and the tires, operations should be performed in accordance with the working radii.
- The table below shows the standard number of part lines for each boom length. When using with other than this number of part lines, the load per line should not exceed 4.25t for the main winch, and 4.5t for the auxiliary winch.

Boom length	9.7 m	16.0 m	22.3 m	Single top
Number of part lines	6	4	4	1

- "Over front" crane operations should be performed only when the AML "over-front area indicator lamp" is lit. The boom must be kept inside a 2° area over front of the carrier when performing "Over front" crane operations without the outriggers.

- The total rated load for the single top shall be the value obtained by subtracting the weight of the hook mounted on the boom from the total rated load of the boom and must not exceed 4.5t.
- High-speed unwind function should not be performed without outriggers.
Booms over 22.3m in length and jibs should not be used without outriggers.
- The "Drive Mode Selection" switch should be set to "4-wheel / Lo" for travelling while hoisting a load and the shift lever should be set to first.
- When travelling while hoisting a load, the swing brake should be applied, the load should be kept as close to the ground as possible but not touching the ground and the speed should be kept at 1.6km/h or less. In particular, any abrupt steering, starting or braking must be avoided.
- Crane operations should not be performed when travelling while hoisting a load.

WORKING RADIUS - LIFTING HEIGHT

**NOTES:**

1. The deflection of the boom and the jib are not incorporated in the figure above.
2. The figure above is for the case where the outriggers are fully extended (360°).
